## Evening Brief

Date/Time Stamp: Tuesday, June 27, 2017 - 10:55 PM

---

### Weather Summary

#### ...High Risk for Wind Tuesday and Wednesday across much of southeastern Utah...

Gusty winds and low relative humidity are expected across southern and eastern Utah through this evening, with wind gusts in the 25 to 30 mph range this afternoon. A Haines index of 6 is forecast for central and southern Utah today.

Winds will increase Wednesday across the Great Basin. Winds will be strongest across northeast Nevada, southwest Idaho, and central and southern Utah. Relative humidities will be well below 15 percent across the southern half of the Great Basin, and will range from 15 to 20 percent across the portions of Nevada and Idaho that will be experiencing gusty winds. Isolated thunderstorms are possible Wednesday afternoon/evening across northern Utah as a cold front moves through the area.

Thursday will be a much quieter day across the area. Gusty north winds will prevail across the area, but speeds will remain below critical thresholds.

Friday into the weekend will see a gradual warming drying trend across the area, though there is the potential for isolated thunderstorms across the Sierras on Friday afternoon.

---

### Preparedness Levels

#### Current:

Great Basin	3
National	2

---

#### Great Basin Fire Activity: Light Activity

**New Fires and Acres: 29 fires for 12,203 acres 6,990 acres large fire growth**

---

### Resources:

- Crews: 22 T1 IHCs in GB, 18 committed, 2 Available and 2 R&R.
  - T1 IMT Team 2 - Martin and T2 IMT Team 4 – Roide – Committed to Brianhead fire.
  - Local IA resources are at drawdown for UT and NV.
  - GBCC has committed an estimated 120 type 3, 4, 6 engines.
  - 1-T1 and 1-T2 helicopter is available in GACC.

## Great Basin Fire Potential Summary

Fine fuels, which have been the main contributor to fire spread early this season, continue to dry out quickly across the Great Basin especially in areas that have remained very dry. Higher than normal fuel loading and continuity exists over the northern half of the Great Basin. ERCs have now climbed to the 80th-95th percentile over southern NV/UT and the AZ Strip, with more advanced fire behavior on ongoing fires in southern Utah.

Lower elevation grasses are cured over the southern 2/3 of the Great Basin, and are in various states of curing across Idaho/Wyoming. South slopes and low elevations are experiencing the fastest curing in the grasses during the recent warm and dry period. Live fuel moisture is still near to above normal across the northern 2/3 of the Great Basin, but on the downward trend.
